### **Questions?**

If you are having issues with your Anaconda download, you can use the web-version of Jupyter Notebooks here: <https://mybinder.org/v2/gh/jupyterlab/jupyterlab-demo/master?urlpath=lab%2Ftree%2Fdemo%2FLorenz.ipynb> (open a new Python3 notebook)

What is concatenating? - globbing two things together, making things cat dog = catdog (like german language)

How can you see which variables have been instantiated in your environment? 'whos' and execute, this will print out a list/table of all the variables in your kernel

Make font larger please - thank you for letting us know!

### **Error**

there is an error in //Challenge:

```
a = str(123)
```

```
print(a[1])
```

-->output is 2 not 1 - great catch!! thank you!
